

AWEX-G Forecast for Friday, Nov. 7 (Nov 8 UT)

Forecast (updated 6:35pm CST): Winds almost easterly, staying below 10mph. Very cloudy tonight with cloud bases lowering during the period. Chance of rain but probably as tonight's operations are winding down. RUC analysis somewhat accurate for our area.

Synopsis: 00Z [surface analysis](#): Not much different from last night, except high pressure has pushed itself out. Isobars are widely spaced.

[OK mesonet](#): Calm to light winds from the NE/East. Temps in the mid- to high-40s right now with dewpoints below freezing.

[Grant County forecast](#): Tonight. Cloudy. A 30 percent chance of rain after midnight. Lows in the mid 30s. East winds around 10 mph.

[RUC cloud forecast](#): Clear until midnight, then cirrus clouds over CART site with lower-based clouds moving in after that.

Observations at SGP@00 Z: Cold and Cloudy.

Decisions made at the 7pm AWEX-G meeting:

1) Cloudy! Decided to call it a No-Go night.

What actually occurred?

1) No-GO

Lidars

No SRL data tonight.

CARL ran throughout.
